Calculate the binomial confusion matrix

BinomialLogisticRegression.ecl

Binomial logistic regression using iteratively re-weighted least squares

Confusion.ecl

Generate the confusion matrix, to compare actual versus predicted response variable values

Constants.ecl

Constants used by Logistic Regression

DataStats.ecl

Produce summary information about the datasets

Deviance\_Analysis.ecl

Analysis of Deviance Report

Deviance\_Detail.ecl

Deviance detail report

dimm.ecl

Matrix multiply when either A or B is a diagonal and is passed as a vector

enum\_workitems.ecl

Create an enumeration of string contents to be used as work items

ExtractBeta.ecl

Extract the beta values form the model dataset

ExtractBeta\_CI.ecl

Extract the beta values and confidence intervals from the model dataset

ExtractBeta full.ecl

Extract the coefficient information including confidence intervals, z and p values

ExtractBeta pval.ecl

Extract the beta values including z and p value from the model

ExtractReport.ecl

Create a model report from a model

LogitPredict.ecl

Predict the category values with the logit function and the supplied beta coefficients

LogitScore.ecl

Calculate the score using the logit function and the supplied beta coefficients

LUCI Model.ecl

Create a LUCI model file description of the model(s) from the external version of the model

Model Deviance.ecl

Model Deviance Report

Named Model.ecl

Apply external labels for work items and field names to a model

Null Deviance.ecl

Return Deviance information for the null model, that is, a model with only an intercept

#### **DATASTATS** DataStats

```
/ EXPORT DATASET(Types.Data_Info) DataStats

(DATASET(Core_Types.NumericField) indep,
DATASET(Core_Types.DiscreteField) dep, BOOLEAN
field_details=FALSE)
```

Produce summary information about the datasets.

When field\_details = FALSE, indicates the range for the x and y (independent and dependent) columns.

When field\_details = TRUE, the cardinality, minimum, and maximum values are returned. A zero cardinality is returned when the field cardinality exceeds the Constants.limit card value.

Note that a column of all zero values cannot be distinguished from a missing column.

PARAMETER indep || TABLE ( NumericField ) — data set of independent variables.

**PARAMETER** dep ||| TABLE ( DiscreteField ) — data set of dependent variables.

PARAMETER field\_details || BOOLEAN — Boolean directive to provide field level info.

RETURN TABLE ( { UNSIGNED2 wi , UNSIGNED4 dependent\_fields , UNSIGNED4 dependent\_records , UNSIGNED4 independent\_fields , UNSIGNED4 independent\_records , UNSIGNED4 dependent\_count , UNSIGNED4 independent\_count , TABLE ( Field\_Desc ) dependent\_stats , TABLE ( Field\_Desc ) independent\_stats } ) — a data set of information on each work item in Data\_Info format.

# Deviance\_Analysis

Go Up

#### **IMPORTS**

Types | \_versions.ML\_Core.V3\_2\_2.ML\_Core.Math |

#### **DESCRIPTIONS**

### **DEVIANCE\_ANALYSIS** Deviance\_Analysis

```
/ EXPORT DATASET(Types.AOD_Record) Deviance_Analysis

(DATASET(Types.Deviance_Record) proposed,
DATASET(Types.Deviance_Record) base)
```

Analysis of Deviance Report.

Compare deviance information between two models, a base and and proposed model.

Analysis of Deviance is analogous to the Analysis of Variance (ANOVA) used in least-squares modeling, but adapted to the general linear model (GLM). In this case it is adapted specifically to the logistic model.

The inputs are the deviance records for each model as obtained from a call to Model\_Deviance.

PARAMETER proposed ||| TABLE ( Deviance\_Record ) — deviance records of the proposed model.

**PARAMETER** <u>base</u> ||| TABLE ( Deviance\_Record ) — deviance records of the base model for comparison.

RETURN TABLE ( { UNSIGNED2 wi , UNSIGNED4 classifier , UNSIGNED8 residual\_df , UNSIGNED8 df , REAL8 residual\_dev , REAL8 deviance , REAL8 p\_value } ) — the comparison of the deviance between the models in AOD\_Record format.

## dimm

Go Up

#### **IMPORTS**

std.blas | std.BLAS.Types |

#### **DESCRIPTIONS**

#### **DIMM** dimm

```
Types.matrix_t dimm

(BOOLEAN transposeA, BOOLEAN transposeB, BOOLEAN diagonalA, BOOLEAN diagonalB, Types.dimension_t m, Types.dimension_t n,

Types.dimension_t k, Types.value_t alpha, Types.matrix_t A,

Types.matrix_t B, Types.value_t beta=0.0, Types.matrix_t C=[])
```

Matrix multiply when either A or B is a diagonal and is passed as a vector.

Computes: alpha\*op(A) op(B) + beta\*C where op() is transpose.

```
PARAMETER transposeA || BOOLEAN — true when transpose of A is used.
```

- PARAMETER transposeB || BOOLEAN true when transpose of B is used.
- PARAMETER diagonal | | BOOLEAN true when A is the diagonal matrix.
- PARAMETER diagonalB || BOOLEAN true when B is the diagonal matrix.
- PARAMETER <u>m</u> || UNSIGNED4 number of rows in product.
- **PARAMETER**  $\underline{\mathbf{n}}$  ||| UNSIGNED4 number of columns in product.
- **PARAMETER**  $\underline{\mathbf{k}}$  || UNSIGNED4 number of columns/rows for the multiplier/multiplicand.

- PARAMETER alpha || REAL8 scalar used on A.
- PARAMETER <u>A</u> ||| SET ( REAL8 ) matrix A.
- PARAMETER B || SET ( REAL8 ) matrix B.
- PARAMETER beta || REAL8 scalar for matrix C.
- PARAMETER  $\underline{\mathbf{C}} \parallel \parallel \text{SET} (\text{REAL8}) \text{matrix C or empty.}$

**RETURN SET** ( **REAL8** ) — result matrix in matrix\_t format.

 ${\bf Std.BLAS.Types.matrix\_t}$ 

# enum workitems

Go Up

#### **DESCRIPTIONS**

#### **ENUM\_WORKITEMS** enum\_workitems

enum workitems

(dsIn, dsOut, src\_field, wi\_name)

Create an enumeration of string contents to be used as work items.

This macro produces 2 external symbols, dsOut and dsOut\_Map.

The dsOut extends the input dataset with a numeric work-item number.

The dsOut\_Map dataset captures the relationship between the strings that name the work items and the nominal assigned in Workitem\_Mapping format.

PARAMETER <u>dsIn</u> ||| INTEGER8 — the input recordset.

PARAMETER dsOut || INTEGER8 — the symbol to use for the appended data.

PARAMETER <u>src\_field</u> ||| INTEGER8 — a field name to use to discriminate work-items.

PARAMETER wi\_name ||| INTEGER8 — the field name for the work item value assigned.

**RETURN** — Nothing. The macro creates the symbols 'dsOut' and 'dsOut\_Map' inline.

Types.Workitem\_Mapping

# LUCI\_Model

Go Up

## **IMPORTS**

Types | std.Str | std.system.ThorLib |

## **DESCRIPTIONS**

## LUCI\_MODEL LUCI\_Model

```
/ EXPORT DATASET(Types.LUCI_Rec) LUCI_Model

(DATASET(Types.LUCI_Model_Rqst) rqst,
DATASET(Types.External_Model) mod, STRING
wi_field='work_item')
```

Create a LUCI model file description of the model(s) from the external version of the model.

LUCI is a proprietary format used within LexisNexis.

The multi-score card per model case assumes that the score card selection is based solely upon the work item field. If this is not the case, the L1SE records will need to be patched.

The model id and name may have a "\$" character that is updated to match the work item when there are multiple models applied. If the strings do not have a "\$" character, the work item string is appended.

The score card name may have a "\$" character which is updated to match the work item. If the name is blank, the score card is named for the work item.

LUCI data fields may not contain comma characters. This function requires that the work item identification strings do not contain characters that need special handling for CSV data.

PARAMETER rqst || TABLE ( LUCI\_Model\_Rqst ) — the information to map work items to

models in LUCI\_Model\_Rqst format.

**PARAMETER** mod ||| TABLE (External\_Model) — the model with the external field names applied in External\_Model format as returned from Named\_Model.

PARAMETER wi\_field || STRING — the field name holding the work item identification string.

**RETURN** TABLE ( { STRING line } ) — The lines of the LUCI file in LUCI\_Rec format.

DATASET(Types.FieldName_Mapping) expl_map,
DATASET(Types.FieldName_Mapping) resp_map,
DATASET(Types.WorkItem_mapping) wi_map=empty,
REAL8 level=0.05)
```

Apply external labels for work items and field names to a model.

Returns an expanded model that includes:

- coefficients
- z and p-values
- independent variable field names
- dependent variable field names
- work-item names

PARAMETER mod\_ds ||| TABLE ( Layout\_Model ) — the model as returned from GetModel.

- **PARAMETER** expl\_map ||| TABLE (FieldName\_Mapping) the relation of the explanatory or independent variables to the field names for those variables in FieldName\_Mapping format.
- **PARAMETER** resp\_map ||| TABLE (FieldName\_Mapping) the relation of the response variable column numbers to the field names in FieldName\_Mapping format.
- **PARAMETER** wi\_map ||| TABLE ( WorkItem\_Mapping ) (optional) mapping of workitem strings to workitem nominals in FieldName\_Mapping format.
- **PARAMETER** <u>level</u> ||| REAL8 (optional) value for confidence intervals. Default = 0.05.
- RETURN TABLE ( { STRING work\_item , STRING response\_field , UNSIGNED2 wi , UNSIGNED4 dep\_nom , TABLE ( External\_Coef ) coef } ) an expanded model in External\_Model format.

## **NUMERICFIELD NumericField**

Types \

NumericField

The NumericField layout defines a matrix of Real valued data-points. It acts as the primary Dataset layout for interacting with most ML Functions. Each record represents a single cell in a matrix. It is most often used to represent a set of data-samples or observations, with the 'id' field representing the data-sample or observation, and the 'number' field representing the various fields within the observation.

- **FIELD** <u>wi</u> ||| The work-item id, supporting the Myriad style interface. This allows multiple independent matrixes to be contained within a single dataset, supporting independent ML activities to be processed in parallel.
- **FIELD** <u>id</u> ||| This field represents the row-number of this cell of the matrix. It is also considered the record-id for observations / data-samples.
- **FIELD** <u>number</u> ||| This field represents the matrix column number for this cell. It is also considered the field number of the observation
- **FIELD** value ||| The value of this cell in the matrix.

## **DISCRETEFIELD** DiscreteField

Types \

DiscreteField

The Discrete Field layout defines a matrix of Integer valued data-points. It is similar to the NumericField layout above, except for only containing discrete (integer) values. It is typically used to convey the class-labels for classification algorithms.

**FIELD** wi || — The work-item id, supporting the Myriad style interface. This allows multiple independent matrixes to be contained within a single dataset, supporting independent ML activities to be processed in parallel.

**FIELD** <u>id</u> ||| — This field represents the row-number of this cell of the matrix. It is also considered the record-id for observations / data-samples.

**FIELD** <u>number</u> ||| — This field represents the matrix column number for this cell. It is also considered the field number of the observation

**FIELD** value || — The value of this cell in the matrix.

## FIELD\_DESC Field\_Desc

Types \

 $Field\_Desc$ 

Describe information about each field in a training set.

**FIELD** <u>number</u> ||| UNSIGNED4 — the column (feature) number.

**FIELD** cardinality || UNSIGNED4 — the number of unique values in the field.

**FIELD** min\_value ||| REAL8 — the minimum value for the field.

**FIELD** max\_value ||| REAL8 — the maximum value for the field.

## DATA\_INFO Data\_Info

Types \

Data Info

Describes information about a training dataset composed of independent and dependent columns.

- **FIELD** <u>wi</u> || UNSIGNED2 the work-item number.
- **FIELD** dependent\_fields || UNSIGNED4 the number of fields in the dependent data.
- FIELD dependent\_records || UNSIGNED4 the number of records in the dependent data.
- **FIELD** independent\_fields || UNSIGNED4 the number of fields in the independent data.
- **FIELD** independent\_records || UNSIGNED4 the number of records in the independent data.
- **FIELD** <u>dependent\_stats</u> ||| TABLE ( Field\_Desc ) dataset of Field\_Desc records describing each of the fields of the dependent data.
- **FIELD** <u>independent\_stats</u> ||| TABLE (Field\_Desc ) dataset of Field\_Desc records describing each of the fields of the independent data.
- **FIELD** dependent\_count ||| UNSIGNED4 No Doc
- **FIELD** independent\_count ||| UNSIGNED4 No Doc
- Field\_Desc

## NUMERICFIELD\_U NumericField\_U

Types \

 ${\bf Numeric Field\_U}$ 

Record structure to add a 'Universe Number' to a NumericField allowing multiple independent NumericField matrixes within a work-item.

- **FIELD**  $\underline{\mathbf{u}}$  ||| UNSIGNED1 the 'universe' number identifying a distinct matrix within a NumericField dataset and work-item.
- FIELD wi || UNSIGNED2 No Doc
- FIELD id || UNSIGNED8 No Doc
- **FIELD** <u>number</u> ||| UNSIGNED4 No Doc
- **FIELD** <u>value</u> ||| REAL8 No Doc

## DISCRETEFIELD\_U DiscreteField\_U

Types \

#### DiscreteField U

Record structure to add a 'Universe Number' to a DiscreteField allowing multiple independent DiscreteField matrixes within a work-item.

- **FIELD**  $\underline{\mathbf{u}}$  ||| UNSIGNED1 the 'universe' number identifying a distinct matrix within a DiscreteField dataset and work-item.
- FIELD wi || UNSIGNED2 No Doc
- FIELD id || UNSIGNED8 No Doc
- **FIELD** <u>number</u> ||| UNSIGNED4 No Doc
- FIELD <u>value</u> ||| INTEGER4 No Doc

## LAYOUT\_COLUMN\_MAP Layout\_Column\_Map

Types \

#### Layout\_Column\_Map

Layout for a column map record that is used to remap column numbers.

- **FIELD** wi || UNSIGNED2 the work-item number.
- **FIELD** orig\_number || UNSIGNED4 the original field number.
- FIELD remap\_number || UNSIGNED4 the mapped-to field number.

## **CLASSIFIER\_STATS** Classifier\_Stats

Types \

#### Classifier Stats

Statistics about the effectiveness of each classifier in a model.

- **FIELD** <u>column</u> || UNSIGNED4 the classifier field number.
- **FIELD** max\_delta ||| REAL8 the max\_delta value for the classifier.
- FIELD <u>iterations</u> ||| UNSIGNED4 the number of iterations used to train the classifier.
- **FIELD** <u>correct</u> || UNSIGNED4 the number of classes predicted correctly in the training data.
- **FIELD** <u>incorrect</u> ||| UNSIGNED4 the number of classes predicted incorrectly in the training data.

## MODEL\_REPORT Model\_Report

Types \

#### Model\_Report

Statistical information about a model.

One record is generated per work-item.

- FIELD wi || UNSIGNED2 the work-item
- FIELD max\_iterations || UNSIGNED4 the maximum iterations use to train the model.

- FIELD epsilon | | REAL8 the 'epsilon' value used within the model.
- **FIELD** dep\_vars || UNSIGNED4 the number of dependent variables (i.e. classifiers).
- **FIELD** ind\_vars || UNSIGNED4 the number of independent variables (i.e. features).
- **FIELD** <u>obs</u> || UNSIGNED8 the number of observations (i.e. records) in the training data.
- **FIELD** <u>builder</u> || UNSIGNED2 the identifier for the builder used to train the model.
- **FIELD** <u>stats</u> ||| TABLE ( Classifier\_Stats ) child dataset of Classifier\_Stats, one for each classifier in the work-item.
- Classifier\_Stats

## BINOMIAL\_CONFUSION\_SUMMARY Binomial\_Confusion\_Summary

#### Types \

#### Binomial\_Confusion\_Summary

Accuracy stats for binomial classifications.

One record per work-item and classifier.

- FIELD <u>wi</u> || UNSIGNED2 the work-item number.
- **FIELD** <u>classifier</u> ||| UNSIGNED4 the classifier field number (i.e. dependent field number).
- **FIELD** <u>true\_positive</u> || UNSIGNED8 the count of true positive results (i.e. predicted = TRUE, actual = TRUE).
- **FIELD** <u>true\_negative</u> ||| UNSIGNED8 the count of true negative results (i.e. predicted = FALSE, actual = FALSE).
- **FIELD** <u>false\_positive</u> ||| UNSIGNED8 the count of false\_positive results (i.e. predicted = TRUE, actual = FALSE).
- **FIELD false\_negative** ||| UNSIGNED8 the count of false\_negative results (i.e. predicted = FALSE, actual = TRUE).
- **FIELD** cond\_pos ||| UNSIGNED8 the count of results where actual = TRUE.
- **FIELD**  $pred_pos$  ||| UNSIGNED8 the count of results where predicted = TRUE.
- **FIELD** cond\_neg || UNSIGNED8 the count of results where actual = FALSE.

- **FIELD pred\_neg** ||| UNSIGNED8 the count of results where predicted = FALSE.
- FIELD prevalence ||| REAL8 cond pos / total.
- **FIELD** accuracy ||| REAL8 (true\_positive + true\_negative) / total.
- **FIELD** true\_pos\_rate ||| REAL8 true\_positive / cond\_pos.
- **FIELD** false\_pos\_rate ||| REAL8 false\_positive / cond\_neg.
- **FIELD** true\_neg\_rate ||| REAL8 true\_negative / cond\_neg.
- FIELD pos\_pred\_val ||| REAL8 true\_positive / pred\_pos.
- **FIELD** <u>false\_disc\_rate</u> ||| REAL8 false\_positive / pred\_pos.
- **FIELD** false\_omit\_rate ||| REAL8 false\_negative / pred\_neg.
- FIELD neg\_pred\_val ||| REAL8 true\_negative / pred\_neg.
- FIELD false\_neg\_rate ||| REAL8 No Doc

## MODEL\_COEF Model\_Coef

## Types \

#### Model Coef

Model Coefficients.

- FIELD wi || UNSIGNED2 the work-item number.
- FIELD ind\_col || UNSIGNED4 the independent column number (i.e feature number).
- FIELD dep nom || UNSIGNED4 the dependent column number (i.e. classifier number).
- FIELD <u>w</u> ||| REAL8 the learned weight (i.e. coefficient).
- FIELD <u>SE</u> ||| REAL8 the Standard Error of the coefficient.

## CONFIDENCE\_MODEL\_COEF Confidence\_Model\_Coef

#### Types \

#### $Confidence\_Model\_Coef$

Model Coefficients with confidence intervals.

- FIELD upper ||| REAL8 the upper range of the confidence interval
- FIELD <u>lower</u> ||| REAL8 the lower range of the confidence interval
- FIELD wi || UNSIGNED2 No Doc
- FIELD ind\_col ||| UNSIGNED4 No Doc
- FIELD dep\_nom ||| UNSIGNED4 No Doc
- FIELD w || REAL8 No Doc
- FIELD se || REAL8 No Doc

## PVAL\_MODEL\_COEF pval\_Model\_Coef

## Types \

#### pval\_Model\_Coef

Model coefficients with z and p-value.

- **FIELD**  $\underline{\mathbf{z}} \parallel \parallel \text{REAL8} \text{the z value.}$
- **FIELD p\_value** ||| REAL8 the p\_value of the coefficient.
- FIELD wi || UNSIGNED2 No Doc
- FIELD ind\_col ||| UNSIGNED4 No Doc
- FIELD dep\_nom || UNSIGNED4 No Doc
- FIELD <u>w</u> ||| REAL8 No Doc
- FIELD se ||| REAL8 No Doc

## FULL\_MODEL\_COEF Full\_Model\_Coef

#### Types \

#### $Full\_Model\_Coef$

Model coefficients with confidence intervals and p-value

- **FIELD**  $\underline{\mathbf{z}} \parallel \text{REAL8} \text{the z value}.$
- **FIELD p\_value** ||| REAL8 the p\_value of the coefficient.
- FIELD upper ||| REAL8 the upper range of the confidence interval
- FIELD lower ||| REAL8 the lower range of the confidence interval
- FIELD wi || UNSIGNED2 No Doc
- FIELD ind\_col ||| UNSIGNED4 No Doc
- **FIELD** dep\_nom ||| UNSIGNED4 No Doc
- FIELD <u>w</u> ||| REAL8 No Doc
- FIELD se ||| REAL8 No Doc

## **EXTERNAL\_COEF** External\_Coef

## Types \

#### External Coef

Model coefficients, confidence intervals, and p-value, plus independent field names, for each coefficient.

- **FIELD** isIntercept ||| BOOLEAN Boolean field is TRUE if this is the intercept coefficient, otherwise FALSE.
- **FIELD field\_name** ||| STRING the name of the independent field for this coefficient.
- FIELD <u>w</u> ||| REAL8 the coefficient value (weight)
- FIELD SE ||| REAL8 the Standard Error of the coefficient

- FIELD <u>z</u> ||| REAL8 the z value.
- **FIELD p\_value** ||| REAL8 the p-value.
- **FIELD** upper ||| REAL8 the upper bound of the confidence interval.
- **FIELD** <u>lower</u> ||| REAL8 the lower bound of the confidence interval.
- FIELD ind\_col || UNSIGNED4 the field number of the independent field for this coefficient.

## **EXTERNAL\_MODEL** External\_Model

Types \

#### External Model

Expanded version of a model with statistics and field names.

Field names include independent data field names, dependent data field names and work-item names.

- **FIELD** work\_item ||| STRING the work-item's name.
- **FIELD** response\_field ||| STRING the name of the classifier field (i.e. dependent field name).
- FIELD wi || UNSIGNED2 the work-item number.
- **FIELD** dep\_nom ||| UNSIGNED4 the field number of the classifier (i.e. dependent field number).
- **FIELD** <u>coef</u> ||| TABLE ( External\_Coef ) child dataset of External\_Coef format. One record per model coefficient.
- External Coef

## RAW\_PREDICTION Raw\_Prediction

Types \

#### Raw Prediction

Record for raw prediction without confidence information.

- **FIELD** <u>raw</u> ||| REAL8 the raw prediction value.
- FIELD wi || UNSIGNED2 No Doc
- FIELD id || UNSIGNED8 No Doc
- **FIELD** <u>number</u> ||| UNSIGNED4 No Doc

## OBSERVATION\_DEVIANCE Observation\_Deviance

#### Types \

#### Observation Deviance

Record to contain deviance information about each observation.

- FIELD wi || UNSIGNED2 the work-item number.
- **FIELD** <u>id</u> || UNSIGNED8 the record id (i.e. observation number).
- FIELD classifier || UNSIGNED4 the dependent field number.
- **FIELD** <u>actual</u> ||| INTEGER4 the actual (i.e. ground truth value).
- **FIELD predicted** ||| INTEGER4 the value predicted by the model.
- FIELD mod\_ll ||| REAL8 log likelihood of the model
- **FIELD** mod\_dev\_component ||| REAL8 the deviance explained by the model
- FIELD mod\_dev\_residual ||| REAL8 the deviance not explained by the model (i.e. the residual)
- **FIELD**  $\underline{\mathbf{nil}} \parallel \parallel \parallel \log \text{ likelihood of the nil model (i.e. model with only a constant term).$
- **FIELD** nil\_dev\_component ||| REAL8 the deviance explained by the null model
- FIELD <u>nil\_dev\_residual</u> ||| REAL8 the deviance not explained by the null model (i.e. the residual)
- FIELD nil\_ll ||| REAL8 No Doc

## **DEVIANCE\_RECORD** Deviance\_Record

#### Types \

#### Deviance Record

Record to hold deviance summary information about a model.

- FIELD wi || UNSIGNED2 the work-item number
- **FIELD** <u>classifier</u> || UNSIGNED4 the classifier number (i.e. field number of the dependent variable).
- FIELD <u>df</u> || UNSIGNED8 degrees-of-freedom of the chi squared distribution.
- **FIELD** <u>deviance</u> ||| REAL8 the total deviance for this classifier.
- FIELD <u>AIC</u> ||| REAL8 the Akaike Information Criteria value.

## AOD\_RECORD AOD\_Record

#### Types \

#### AOD Record

Record to hold Analysis of Deviance (AOD) information for a model.

- **FIELD**  $\underline{\mathbf{wi}}$  ||| UNSIGNED2 the work-item number
- **FIELD** <u>classifier</u> || UNSIGNED4 the classifier number (i.e. field number of the dependent variable).
- FIELD df || UNSIGNED8 degrees of freedom of the chi squared distribution.
- **FIELD** residual\_dev ||| REAL8 the deviance not explained by the model.
- **FIELD** <u>deviance</u> ||| REAL8 the total deviance.
- **FIELD**  $\mathbf{p} \parallel \parallel$  value the probability that the null hypothesis is correct.
- **FIELD** residual\_df ||| UNSIGNED8 No Doc
- **FIELD p\_value** ||| REAL8 No Doc

## FIELDNAME\_MAPPING FieldName\_Mapping

Types \

#### FieldName\_Mapping

Layout used to hold the mapping between a field's number and its name.

**FIELD** orig\_name ||| STRING — typically the field number as a text string (e.g. '2').

**FIELD** assigned\_name ||| STRING — the textual name of the field (e.g. 'age').

## WORKITEM\_MAPPING WorkItem\_Mapping

Types \

#### WorkItem\_Mapping

Layout used to hold the mapping between a work-item number and a textual name for that work-item.

FIELD wi || UNSIGNED2 — the work-item number.

**FIELD** orig\_wi ||| STRING — the work-item name.

## LUCI\_REC LUCI\_Rec

Types \

#### LUCI\_Rec

Layout to store the lines of a generated LUCI model file.

**FIELD** <u>line</u> ||| STRING — the text for a single line for the LUCI file.

## LUCI\_MODEL\_RQST LUCI\_Model\_Rqst

Types \

#### $LUCI\_Model\_Rqst$

Format for information to guide the generation of a LUCI file.

- **FIELD** model\_id ||| STRING a short textual name for the model as used in the LUCI L1MD format.
- **FIELD** model\_name ||| STRING an expanded name for the model as used in the LUCI L1MD format.
- **FIELD** response\_field ||| STRING name of the dependent field (aka classifier name).
- FIELD wi\_list ||| SET ( STRING ) can be set to ['ALL'], or can be a list of work-item names.
- **FIELD** score\_card\_name ||| STRING the score card name pattern (see LUCI\_Model.ecl for details).
